Perigean Spring Tide flooding alert for the Indian coast

There is a possibility of flooding in the low-lying coastal areas, especially during high tide timings due to the Perigean spring tides, for the period January 02-07, 2026. Presence of conditions such as sustained strong onshore winds, high nearshore waves/swells & heavy rainfall and associated discharge can cause nuisance flooding (public inconveniences) especially at high tide times along low-lying coastal areas.

Approximate timings of the higher high-water level and lower high-water level for specific locations and other information are available at the given link:
