India among top scientific nations: Min

Hyderabad: India is at the forefront of handling climate change and global warming, said Harsh Vardhan, while inaugurating the new International Training Centre for operational oceanography that will conduct training programmes for participants from across the world.

Addressing the gathering at the Indian National Centre for Ocean Information Services, he said that India would be able to fulfil several important promises in terms of global targets, especially related to reducing emissions.

"India has now secured a place among the top 10 scientific nations, and ranks sixth in scientific publications. Our country has recorded 14% growth vis-a-vis prevalent global growth of a mere four per cent. India ranks fourth in weather services," the minister said. TNN
